

M82 WORKSPACE // MOLINA HOLDINGS LLC & MOLINA GLOBAL LLC

V3.2 FINAL // STRATEGIC INFRASTRUCTURE INTEGRATION DIAL

M82 LSEG WIRE:	UST 2Y: 4.0740% / 10Y: 4.5281% PCE Headline: 3.8% (3-Yr High) Crude: >\$90.38/bbl	DATE:	May 28, 2026
PLATFORM FEED:	M82 Workspace Terminal Data Sync	STATUS:	RESTRICTED TECHNICAL DATA

Macro Context (M82 LSEG Workspace Integration): Global sovereign bond portfolios face severe pressure as a renewed sell-off drives the 2-year Treasury yield up to 4.0740% and the 10-year yield to 4.5281%. This macro adjustment follows direct kinetic engagements in the Middle East—specifically the IRGC targeting a U.S. airbase following early-morning strikes near Bandar Abbas airport, and automated air defense interceptions over Kuwait. This structural energy shock has triggered a prolonged spike in crude prices over \$90.38/bbl. The underlying inflationary pulse from fuel is projected to lift the headline PCE to a three-year high of 3.8% (Core at 3.3%), keeping term premia structurally elevated.

Concurrently, the Western Energy Corridor monitored within our central framework has achieved definitive decoupling. While Eurasian maritime choke points suffer disruption, this western logistics network moved 11.9 million physical barrels over a three-week window in May, routing an aggregate \$2,332.8 Million USD in gross notional liquidity since January 3rd.

M82 INSTITUTIONAL CLARIFICATION ON SOVEREIGN FLOWS: The USD 2.3328 Billion referenced represents the aggregate notional value of U.S.-tutored Venezuelan crude exports and corresponding U.S. imports along the Western Energy Corridor under U.S. Treasury and OFAC custody. **THESE MACRO-SYSTEMIC FLOWS DO NOT BELONG TO MOLINA HOLDINGS LLC OR MOLINA GLOBAL LLC.** They represent the corridor's liquidity vector and backdrop, not proprietary fund P&L. Ultimate control remains under U.S. Treasury jurisdiction, providing legal protection for Western capital while strictly limiting its discretionary domestic political allocation.

1. PRIVATE INFRASTRUCTURE FINANCIAL BENCHMARKS (EX-SOVEREIGN)

M82 TECHNICAL PARAMETER	TARGET CORRIDOR	RISK IMMUNIZATION & GOVERNING MECHANISM
Consolidated Leverage	3.5x - 4.5x Debt/ EBITDA	Strictly insulated at fund level; completely decoupled from public revenue pools.
Interest Rate Hedging	≥ 80% Fixed-Rate	Mandatory derivatives execution to shield development cash flows from global yield spikes.
Midstream EBITDA Margin	60% - 70%	Optimized logistics and transportation throughput indexed in USD.
Funds From Operations (FFO)	~ 42% on Revenue	High-conversion cash yield baseline designed for private infrastructure assets.
Preferred Return (Hurdle)	8% Compounded	Standard institutional European Waterfall distribution framework.

M82 TECHNICAL PARAMETER	TARGET CORRIDOR	RISK IMMUNIZATION & GOVERNING MECHANISM
Accounting Verification	US GAAP / IFRS	Continuous centralization prepared for Tier-1 Big Four (Deloitte) independent audit.

M82 WORKSPACE // TECHNICAL APPENDIX

REGULATORY ARCHITECTURE & LEGAL INSULATION FRAMEWORK

1. FIDUCIARY SEGREGATION AND REGULATORY BOUNDARIES

The macro-monetary aggregate of USD 2,332,800,000 cleared through the Western Energy Corridor since January 3, 2026, is bound by federal escrow architectures. Title and ultimate beneficial ownership of these clearing revenues reside within designated accounts under federal control. This architecture acts as an automated compliance dampener against regional domestic political manipulation.

Molina Holdings LLC (Tennessee) and Molina Global LLC (Delaware) act strictly as a non-sovereign, private market scaffold. All corporate books, General Partner (GP) capital calls, and Limited Partner (LP) distributions are structurally independent and fully segregated from the countries' sovereign state-level transactions.

2. JURISDICTIONAL INSULATION AND GOVERNANCE DESIGN

- **Molina Holdings LLC (Parent, Investment Manager, and IP Entity):** Domiciled in the State of Tennessee, isolating core proprietary intellectual property and organizational governance.
- **Molina Global LLC (Global General Partner):** Established under the statutory provisions of the State of Delaware.

All B2B infrastructure contracts, project-level financing arrangements, and side-car fund allocations are strictly governed by U.S. Federal Law and UK Common Law. Any enforcement action or contractual dispute is legally restricted to Western federal venues, completely neutralizing local court exposure.

3. THE STATE 51 INTEGRATION MODEL & THE JUNE 19 MILESTONE

The State 51 Integration Model: At a structural level, the corridor's logistical architecture aligns with the long-term geopolitical thesis of the State 51 Integration Model. This framework anchors the region's underlying infrastructure directly into the regulatory, national security, and economic defense perimeter of the Western Hemisphere.

This model is technically supported by the physical coordination of high-tier strategic defense assets (including tactical perimetral security grids and autonomous monitoring arrays monitored via M82 protocols), effectively establishing a permanent, predictable environment for private deployment under common-law institutional parity.

The June 19 Technical Milestone: The accumulated operational baseline of the corridor serves as the catalyst for the upcoming June 19 milestone. On this specific date, the corporate framework triggers the definitive legal anchoring and technical blinding of downstream assets and transport networks into isolated corporate matrices under Common Law Jurisdictions. This process removes localized administrative and regulatory risk, securing long-term operational predictability.

In summary, the corridor's 2.33 Billion are the region's tutored export revenues under U.S. Treasury custody; our private architecture is the legal and technical scaffold that allows institutional capital to interface with midstream metrics under U.S./UK law, completely independent of sovereign discretionary cash flows.
